## Education and Qualifications

|             |                                                                                                                                                                                                                                                                     |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2009 - 2015 | <b>Classical private university</b><br><br>In 2015 completed the full course of “Classic Private University” and obtained complete higher education in the speciality “System software” and obtained qualification of Master of System Software, Software Engineer. |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Base skills:

**Programming** - Clean architecture approach. Working experience with MVVM and MVI (current projects). Multi-module approach, Gradle convention plugins. Flexible to switching between projects. 9 projects behind, 4 of them from the scratch. Following Agile methodology and SCRUM on the projects

**English** - Written/Spoken: Advanced C1-level

Teacher's review: *“Oleksandr can express himself fluently and spontaneously. He has a good pronunciation and vocabulary. He is recommended to improve his grammar skills.”*

**Latest client's feedback of the whole team:** *“Geniusee team provided conscientious engineers with hearts of gold. The team members treated the product like they were owners. They cared deeply about the outcome and worked diligently to meet accelerated project timelines, often outside regular work hours. The senior team members were self-sufficient and often brought solid technical ideas to solve problems. They were communicative and highly collaborative in system design processes and all other product and software development lifecycle phases.”*

## Mobile: Core Qualifications

- 9 years Android developing experience
- Kotlin, Java, Swift, Python, AI Engineer
- Jetpack compose, Kotlin Coroutines, Flow, custom views, Room persistence, DI (Koin, Hilt), Firebase analytics, configurations, push notifications, map SDK, Gradle convention plugins, Ktor, Retrofit, Unit and UI tests, CI/CD (Bitrise, SonarQube, Firebase app distribution) etc.
- Video MediaPlayer and ExoPlayer, camera SDK,
- Experience with both REST API and GraphQL
- KMP & CMP - Kotlin Multiplatform and Compose Multiplatform, Core ML and Augmented Reality kit on iOS

## Projects role/experience/achievements:

### Capgemini Ukraine

**NDA project** - big USA project used cross the globe in news domain. Over 10 million downloads. Android team about 70 engineers divided on squads.

**Role:** Communication through squads, delivering features. Help other participants, pull requests review. Participation in engineering and non engineering meetings.

**Tech stack:** Clean architecture, Hilt, Kotlin Coroutines, Flow, Jetpack Compose, Jetpack navigation, Room DB, Graph QL, Apollo, Datadog. For CI/CD Github and Bitrise. Statsig tool

## **Devlight company**

**Kontakt project** - project from the scratch, 9 people on the project. It is loyalty program application for Azerbaijan market.

**Role:** I was lead android developer on the project with junior developer from the very beginning of the project. My role was to estimate, communication with project owner, project manager, business analyst. Discuss scope of work, prioritize tasks. Give tasks to my junior dev. Building multi module application, integrate CI/CD based on Bitbucket pipeline, with firebase app distribution. Base test coverage. Code review process. Best practices suggestions for backend and frontend communication, and overall share my expertise. Close communication with backend team.

**Tech stack:** Android biometry auth, android keystore, Clean architecture, MVI pattern for presentation layer, Koin for DI, Jetpack Compose, Jetpack navigation, Kotlin Coroutines, Flow, Ktor (networking), Coil for images, Lottie for animations. Firebase push, crashlytics, analytics and config, exoplayer for video playing,

**Holdo project** - project from the scratch, 7 people on the project. The project is about food order and delivery from different chain restaurants.

**Role:** I was only android developer on the project. Close to the end of the project I was mentoring a junior. My role was to estimate, communication with project owner, project manager, business analyst. Discuss scope of work, prioritize tasks. Close communication with backend team for providing more suitable APIs. Building multi module application, integrate CI/CD based on Bitbucket pipeline, with firebase app distribution. Base test coverage. Code review process.

**Tech stack:** Clean architecture, MVVM pattern for presentation layer, Koin for DI, Room DB, Jetpack Compose, Jetpack navigation, Kotlin Coroutines, Flow, Ktor (networking), Coil for images, Lottie for animations. Firebase push, crashlytics, analytics and config.

**Brocard** - project from the scratch, I was added on the very beginning as a second android developer, 9 people on the project. It is e-commerce application for chain of stores and an online retailer of beauty products.

**Role:** There were 2 android devs, my role was to estimate, communication with project owner, project manager, business analyst, building multi module application. Code review process.

**Tech stack:** Clean architecture, MVVM pattern for presentation layer, Android view for presentation, Hilt for DI, Kotlin Coroutines, Flow, Apollo client for (networking), Lottie for animations. Firebase push, crashlytics, analytics and config, deep links, CI/CD was based on Bitbucket pipeline.

**Blago project** - project from the scratch, 9 people on the project. It is real estate application.

**Role:** There were 2 android devs, my role was to estimate, communication with project owner, building multi module application.

**Tech stack:** Clean architecture, MVVM pattern for presentation layer, Koin for DI, Jetpack Compose, Kotlin Coroutines, Flow, Ktor (networking). Firebase push, crashlytics, analytics and config, deep links

**Eldorado project** - mainly support and additional features, 8 people on the project.

**Role:** My role was support and new features, also communication with project owner, project manager, business analyst

**Tech stack:** Clean architecture, MVVM pattern for presentation layer, Android view for presentation, Kotlin Coroutines, Flow, Retrofit client for (networking), Firebase push, crashlytics, analytics and config, Single activity and multi fragment app

## **Geniusee company**

**Zytara project** - project from the scratch, I was added on the very beginning to existing android team. It is FinTech project for US market. The size of the team was approximately 21 people.

**Role:** My role was to estimate, communication with project owner, project manager, business analyst, to develop new features, cover with tests. The size of android team was from 4 to 7 developers. Code review process.

**Tech stack:** SSL pinning, Android biometry auth, android keystore, For CI/CD Github and Bitrise, SonarQube were used, Kotlin coroutines, LiveData, Firebase dynamic links/analytics/, Mockk (for mocking objects in tests), custom views, Glide crashlytics, GraphQL, AWS app sync, Koin for DI, Mockk (for mocking objects in tests), custom views, Glide

**Azuma project** - I joined on support and new features/redesign.

**Role:** My role was to estimate, communication with project owner, project manager, develop new features. I was only android on the project. Team size was 5 people.

**Tech stack:** For CI/CD Github and Bitrise, SonarQube were used, Kotlin coroutines, LiveData, Firebase analytics and crashlytics, Retrofit, Koin for DI

**Internal company project** - working on internal project. It's lifestyle/tools/management application for internal usage. The app was built from scratch using Jetpack compose and MVVM pattern. It's clean architecture approach under the hood. Kotlin only. Gitlab and Bitrise were used. Other stack: Kotlin coroutines, Kotlin Flow, Navigation component, Retrofit, Koin, custom views, Coil, Lottie animation, Google maps

## **Solanteq company**

**Banking application/product** - worked on server driven UI applications (majority were FinTech) for Ukraine and Azerbaijan markets. There were applications from scratch as well as support only and application in the middle of development.

**Role:** My role was to estimate, communication with project owner, project manager, develop new features and support old features for the new clients and as well as for old clients. Apply the new unique feature. There were 3 android devs on the project and 16 people overall. Close communication with backend team for providing more suitable APIs. Code review process.

**Tech stack:** SSL pinning, Android biometry auth, android keystore, LiveData, Firebase analytics and crashlytics, Retrofit, Java/Kotlin, Realm DB, Google maps, camera, Retrofit, custom views, Picasso, uploading images with Retrofit

## **Light IT**

**February 2017 - July 2019** - outsource projects. Alongside other small/support projects two main were: health care project MVVM used, time management project VIPER. Stack were used: Java, android Services, Realm DB, Room persistence, LiveData, Content provider, custom views, Firebase tools, Google maps, Google calendar API
